

## Calibration Record of the Kipp & Zonen CHP1 110614 Pyrheliometer

This page shows the calibration history of the CHP1 110614. The responsivity used to transform the irradiance voltage data into  $\text{Wm}^{-2}$  is a running average of the responsivity obtained over the years. This reduces the variation of the responsivities associated with the calibration random uncertainties (See Figs 1 & 2). The responsivity values used are in the comprehensive format file or the site files. The responsivity measured during specific calibrations are listed in Table 1.

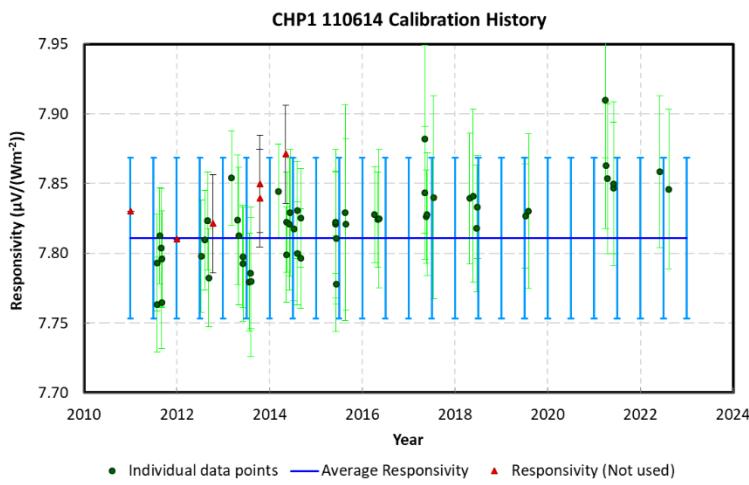

Figure 1: All calibration data plotted against time with long-term trend

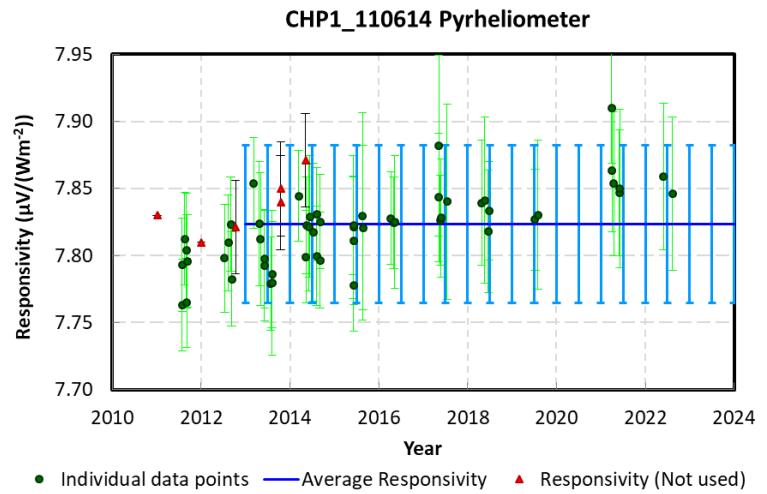

Figure 2: Calibration data plotted against time for 10 year trend

### Information provided in the Table 1 are:

- Date of calibration
- Responsivity value
- Uncertainty at the 95% level of confidence
- Average SZA over which the calibration value was obtained
- Average temperature during the calibration
- Type of calibration and instruments used
- Location of calibration
- Notes
